

# RIPL Pallet

Reusable Intelligent Pallet Logistics

## About us:

Established in March 2019, RIPL Pallet is primarily engaged in pallet pooling, availing high quality plastic pallets under various rental models. In our short time since establishment, we have successfully acquired prominent clients and continue to serve their end-users including multinationals and local players.

RIPL offers various pooling services depending on the nature of the supply chain as well as the option to choose between pure HDPE & recycled material.

RIPL Pallet would like to offer an alternative transport packaging model as opposed to the one-way wood pallet shipments used today.

## Mission:

RIPL Pallet's goal is to eliminate one-way transport packaging & the use of wood.

# Introduction to Pallet Pooling :

---

FMCGs are consuming enormous quantities of pallets made of wood in order to keep up with their deliveries. Procurement, management and storage of pallets are major pain points for those working in the logistics industry. Product damage, human injury, customer complaints and excess waste are common due to faulty pallets. The number of forests and trees that are cut down to manufacture pallets is astronomical; which in return is killing our environment .

By Introducing plastic RTP (returnable transport packaging), an immediate impact is noticed through supply chain optimization, waste elimination, satisfied customers as well as large savings added directly to the bottom line .

RIPL offers a total pallet solution by providing suitable high-quality plastic pallets to meet your business's needs. The pallets are imbedded with an RFID tag that provides complete visibility and valuable data reports at a click of a button. Our plastic pallets are 100%recyclable making it a green solution for such practices .

# Products :

RIPL pallet sells and rents light transport packaging equipment such as Plastic pallets of various sizes and designs, IBC's and crates. RIPL takes pride in introducing several new products to the region that were otherwise unknown, such as the Agri-bin used in harvesting sizable quantities of citrus and other produce, The Combo IBC which replaces the old drums solution used to transport large quantities of liquids, concentrates and puree

# Services :

## RIPL offers 2 main services :

RIPL is the only company in the region that is providing pallet pooling services & tracking returnable transport packaging assets using RFID technology

- Pool /rent transport packaging equipment
- RFID asset tracking technology

# Quality :

products are ISO 22000:2005, ISO 9001:2015, ISO 14001:2015 certified .

# Value Added :

- Streamlining supply chain
- System visibility
